

# GulfCarX

The AI-Powered Used Car Marketplace for the Gulf

## Feature 1 – My Garage: Vehicle Profiles & Fitment Badges

- Users save up to 5 vehicles (make/model/year/trim/engine) into a Garage.
- Every listing shows a "Compatible with your <vehicle>" badge using fitment data.
- Includes VIN decoder (via NHTSA API), mileage-based reminders, and back-in-stock alerts per vehicle.

## Feature 2 – AI Genie: Conversational Parts/Car Finder

- Conversational assistant where users describe symptoms or needs in plain language.
- Maps text or OBD-II codes to exact parts/cars, does OEM vs aftermarket explanation, and suggests complementary items.
- Uses Genkit + Cloudflare Workers AI with RAG over your catalog.

## Feature 3 – AI Demand Forecasting Dashboard (Vendors)

- Vendor dashboard predicting demand spikes by category and season.
- Shows search-vs-stock gaps, competitor pricing undercuts, and 30/60/90-day demand curves.
- Built with analytics tables + forecasting model (SageMaker/Vercel AI) and charted in a Next.js dashboard.

## Feature 4 – Verified Fitment Trust Engine

- "Verified Fit" badge unlocked when 10+ buyers with matching vehicles confirm the part fits.
- Fitment Confidence Score (0–100), install photo uploads, supersession alerts, and counterfeit flags.
- Extends your existing reviews and admin system with extra fields and moderation.

## Feature 5 – Shop Local: Vendor Proximity & Pickup

- Shows "Available today at X vendors within Y km" on listings using Mapbox + geo queries.
- Reserve & Pickup (hold for a few hours, pay at shop) and online vs local price comparison.
- Vendor self-onboarding and inventory sync APIs to power local availability.

## Feature 6 – Smart Bundles & Maintenance Kit Builder

- AI-generated maintenance kits based on vehicle and mileage (e.g., "60K service kit").
- "Fix it right" bundles that automatically add related parts, plus seasonal bundles.
- Can support subscription delivery (oil/filter, etc.) via payment gateway subscriptions.

## Feature 7 – Seller Reputation & Warranty Transparency

- Seller score based on return rates, complaints, KYC, and authenticity.
- AI-parsed warranty text into simple summaries ("Lifetime parts, no labour, 90-day return").
- Badges for verified warehouse, thresholds for high return rate, and KYC-gated onboarding.

## Feature 8 – AI Visual Part Identification

- User uploads a photo of a broken/unknown part; AI returns part name, OEM number, and SKUs.
- Also supports VIN plate scanning and worn-part comparison (confirming correct replacement).
- Uses Cloudflare Workers AI vision + Firebase Storage + async queue with human review for low confidence.

# The GCC automotive trust deficit

## Fragmented Experience

Buyers scatter across Dubizzle, CarSwitch, offline dealers, and informal WhatsApp groups.

## Opaque Pricing

Owners lack fair value benchmarks; buyers constantly risk overpaying based on subjective seller text.

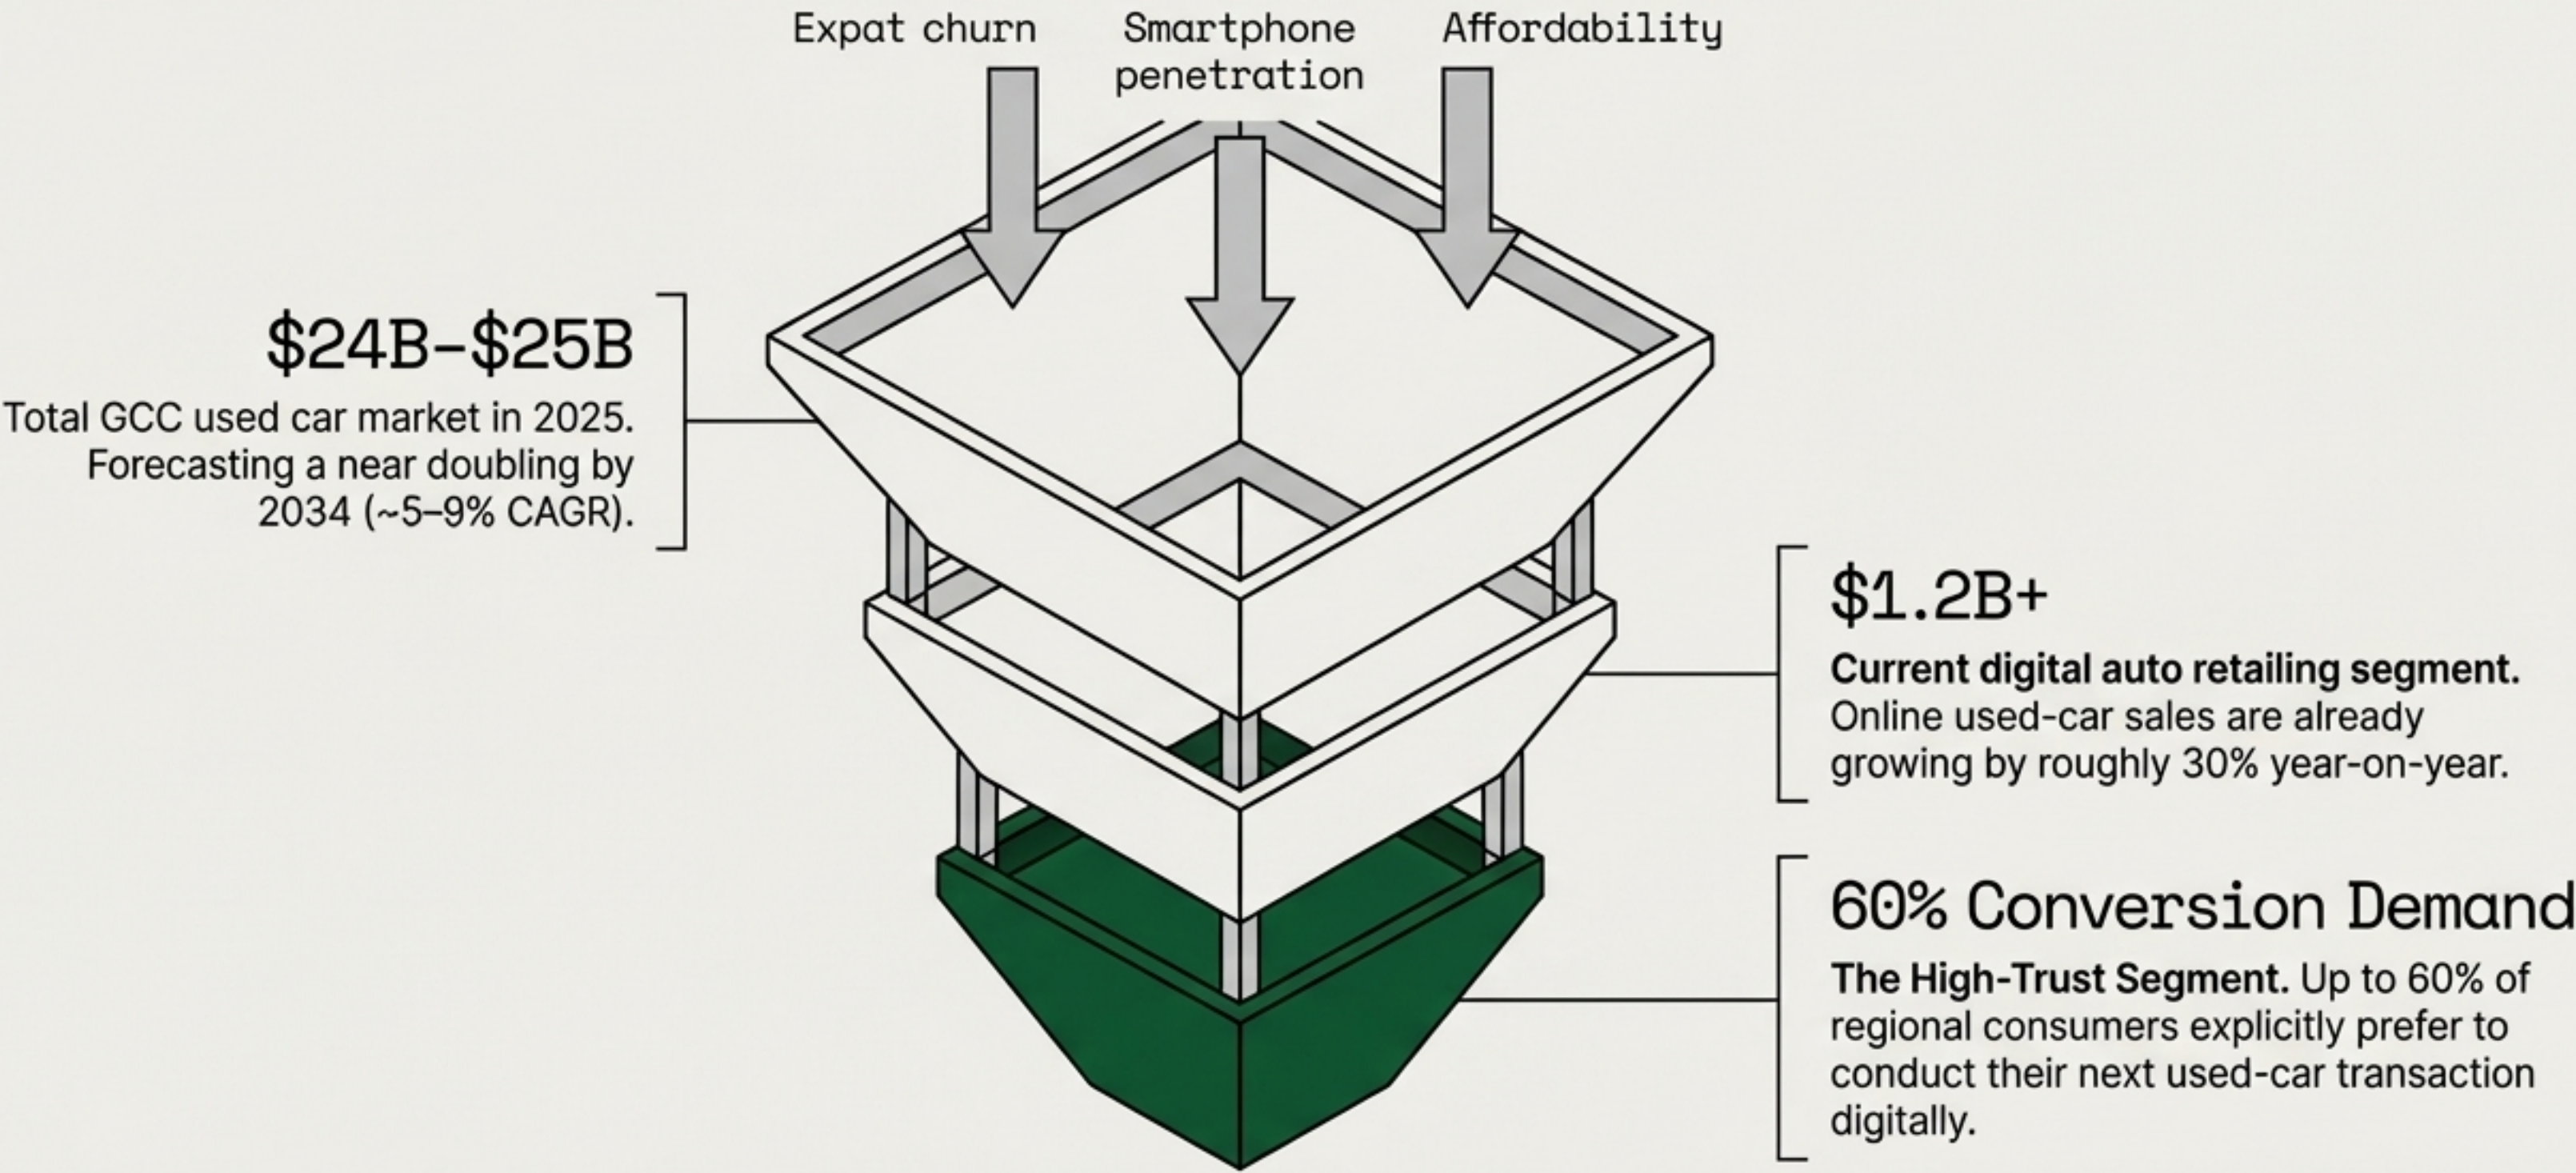

## Hidden Damage

Listings are lightly vetted. Vehicle condition, accident history, and maintenance records remain critically opaque.

The result: prolonged time-to-sale and deeply eroded consumer confidence.

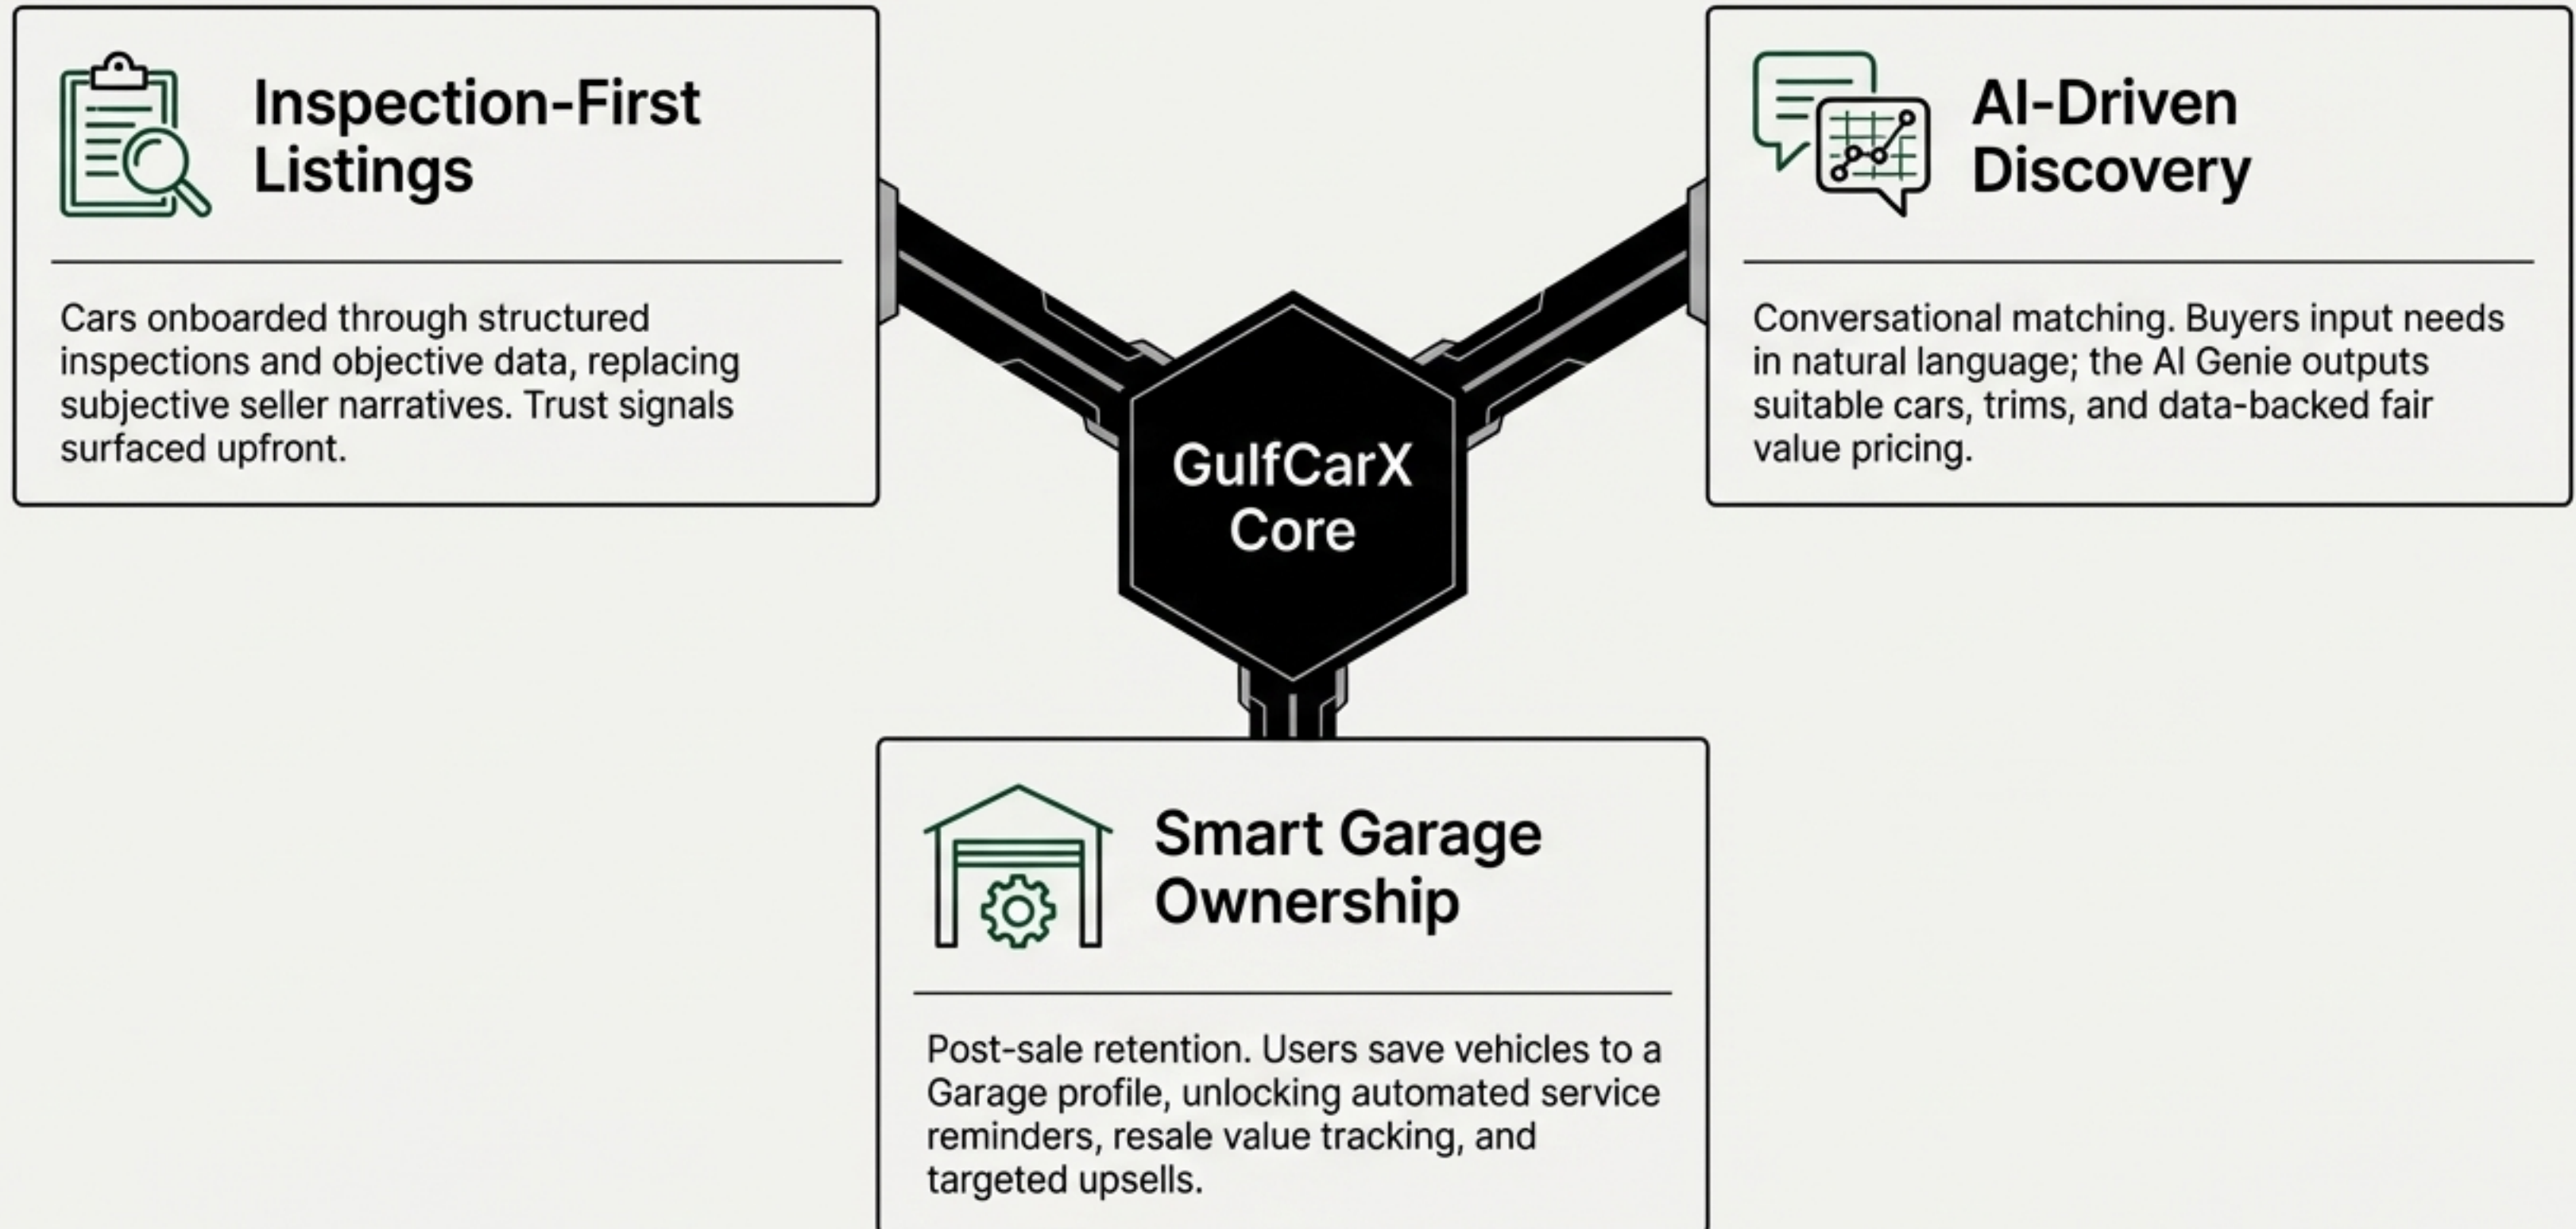

# A multi-billion dollar market accelerating toward digital retailing

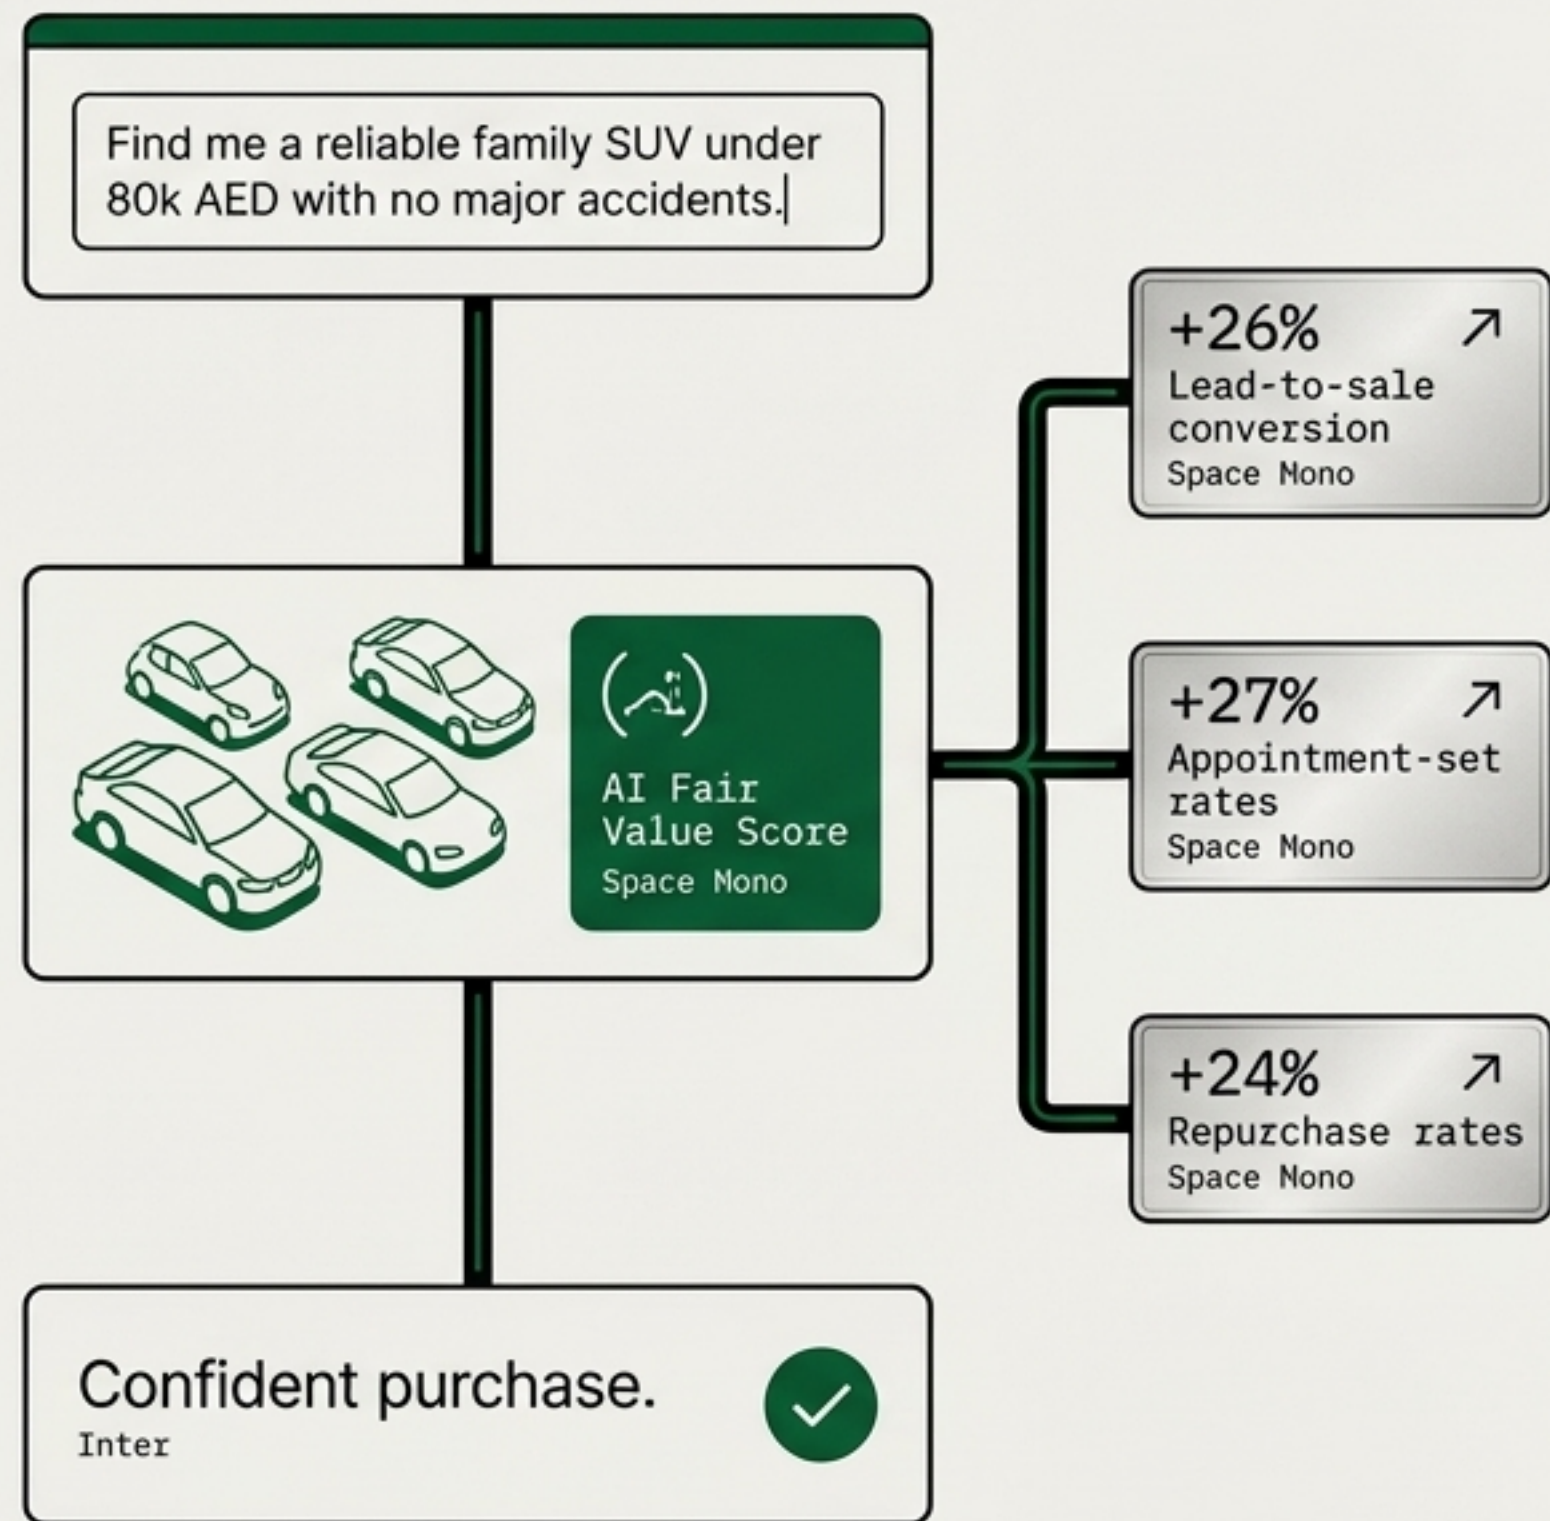

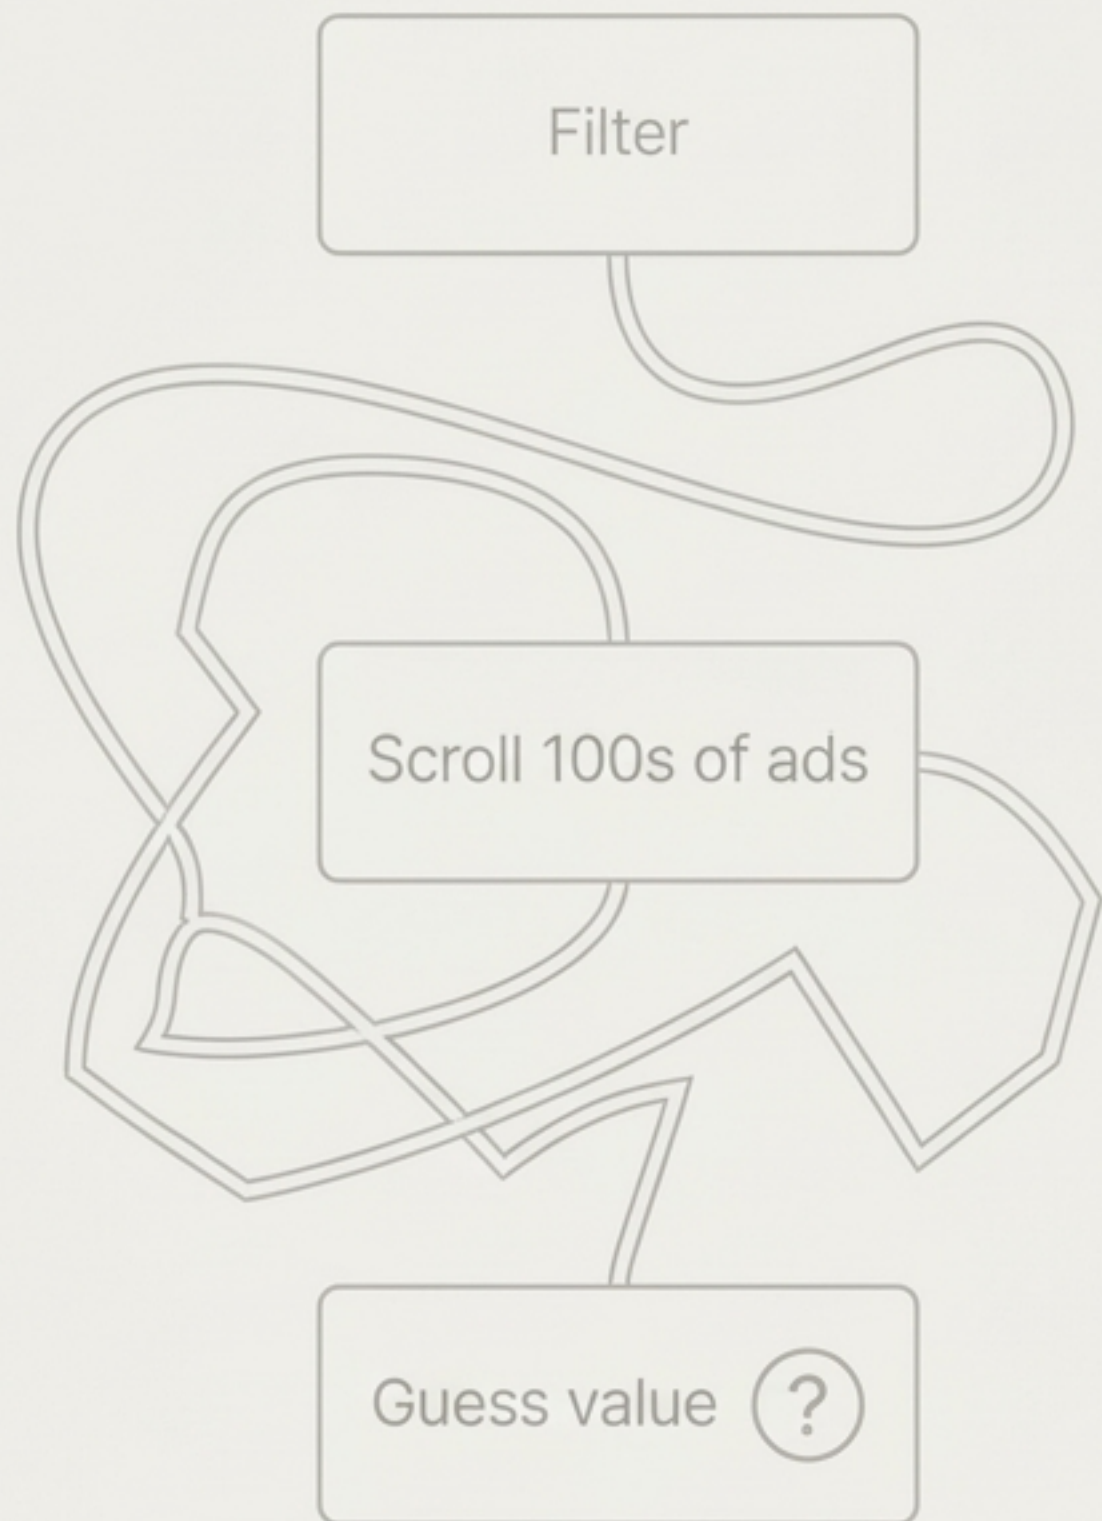

## “A complete transaction and trust layer for the Gulf” in GT Sectra

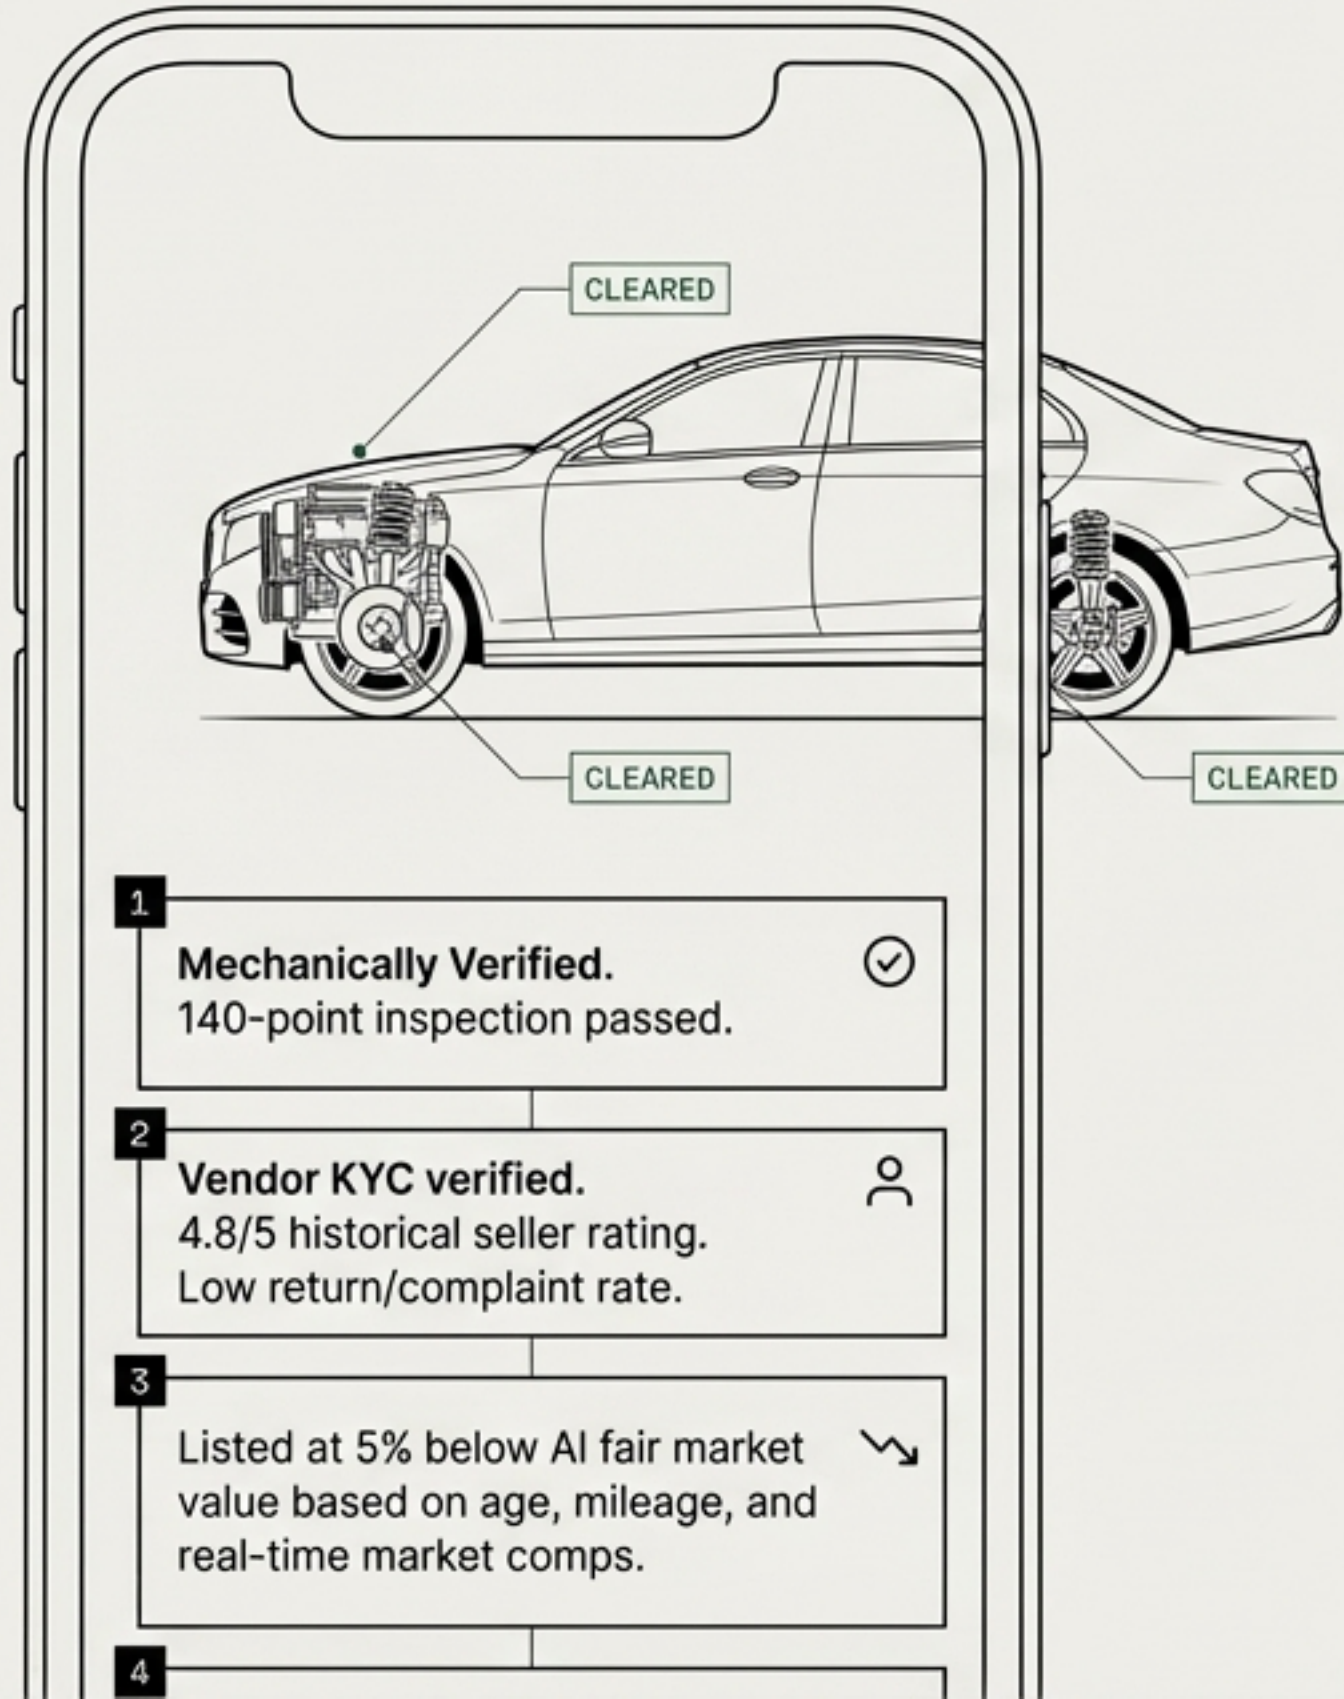

# AI Genie: Structurally reshaping the buyer journey

## The Trust Engine: Eradicating opacity with objective data

Replacing subjective  
ad copy with  
structured,  
transparent, and  
accountable  
vehicle histories.

# Capturing the high-trust, data-rich segment of the market

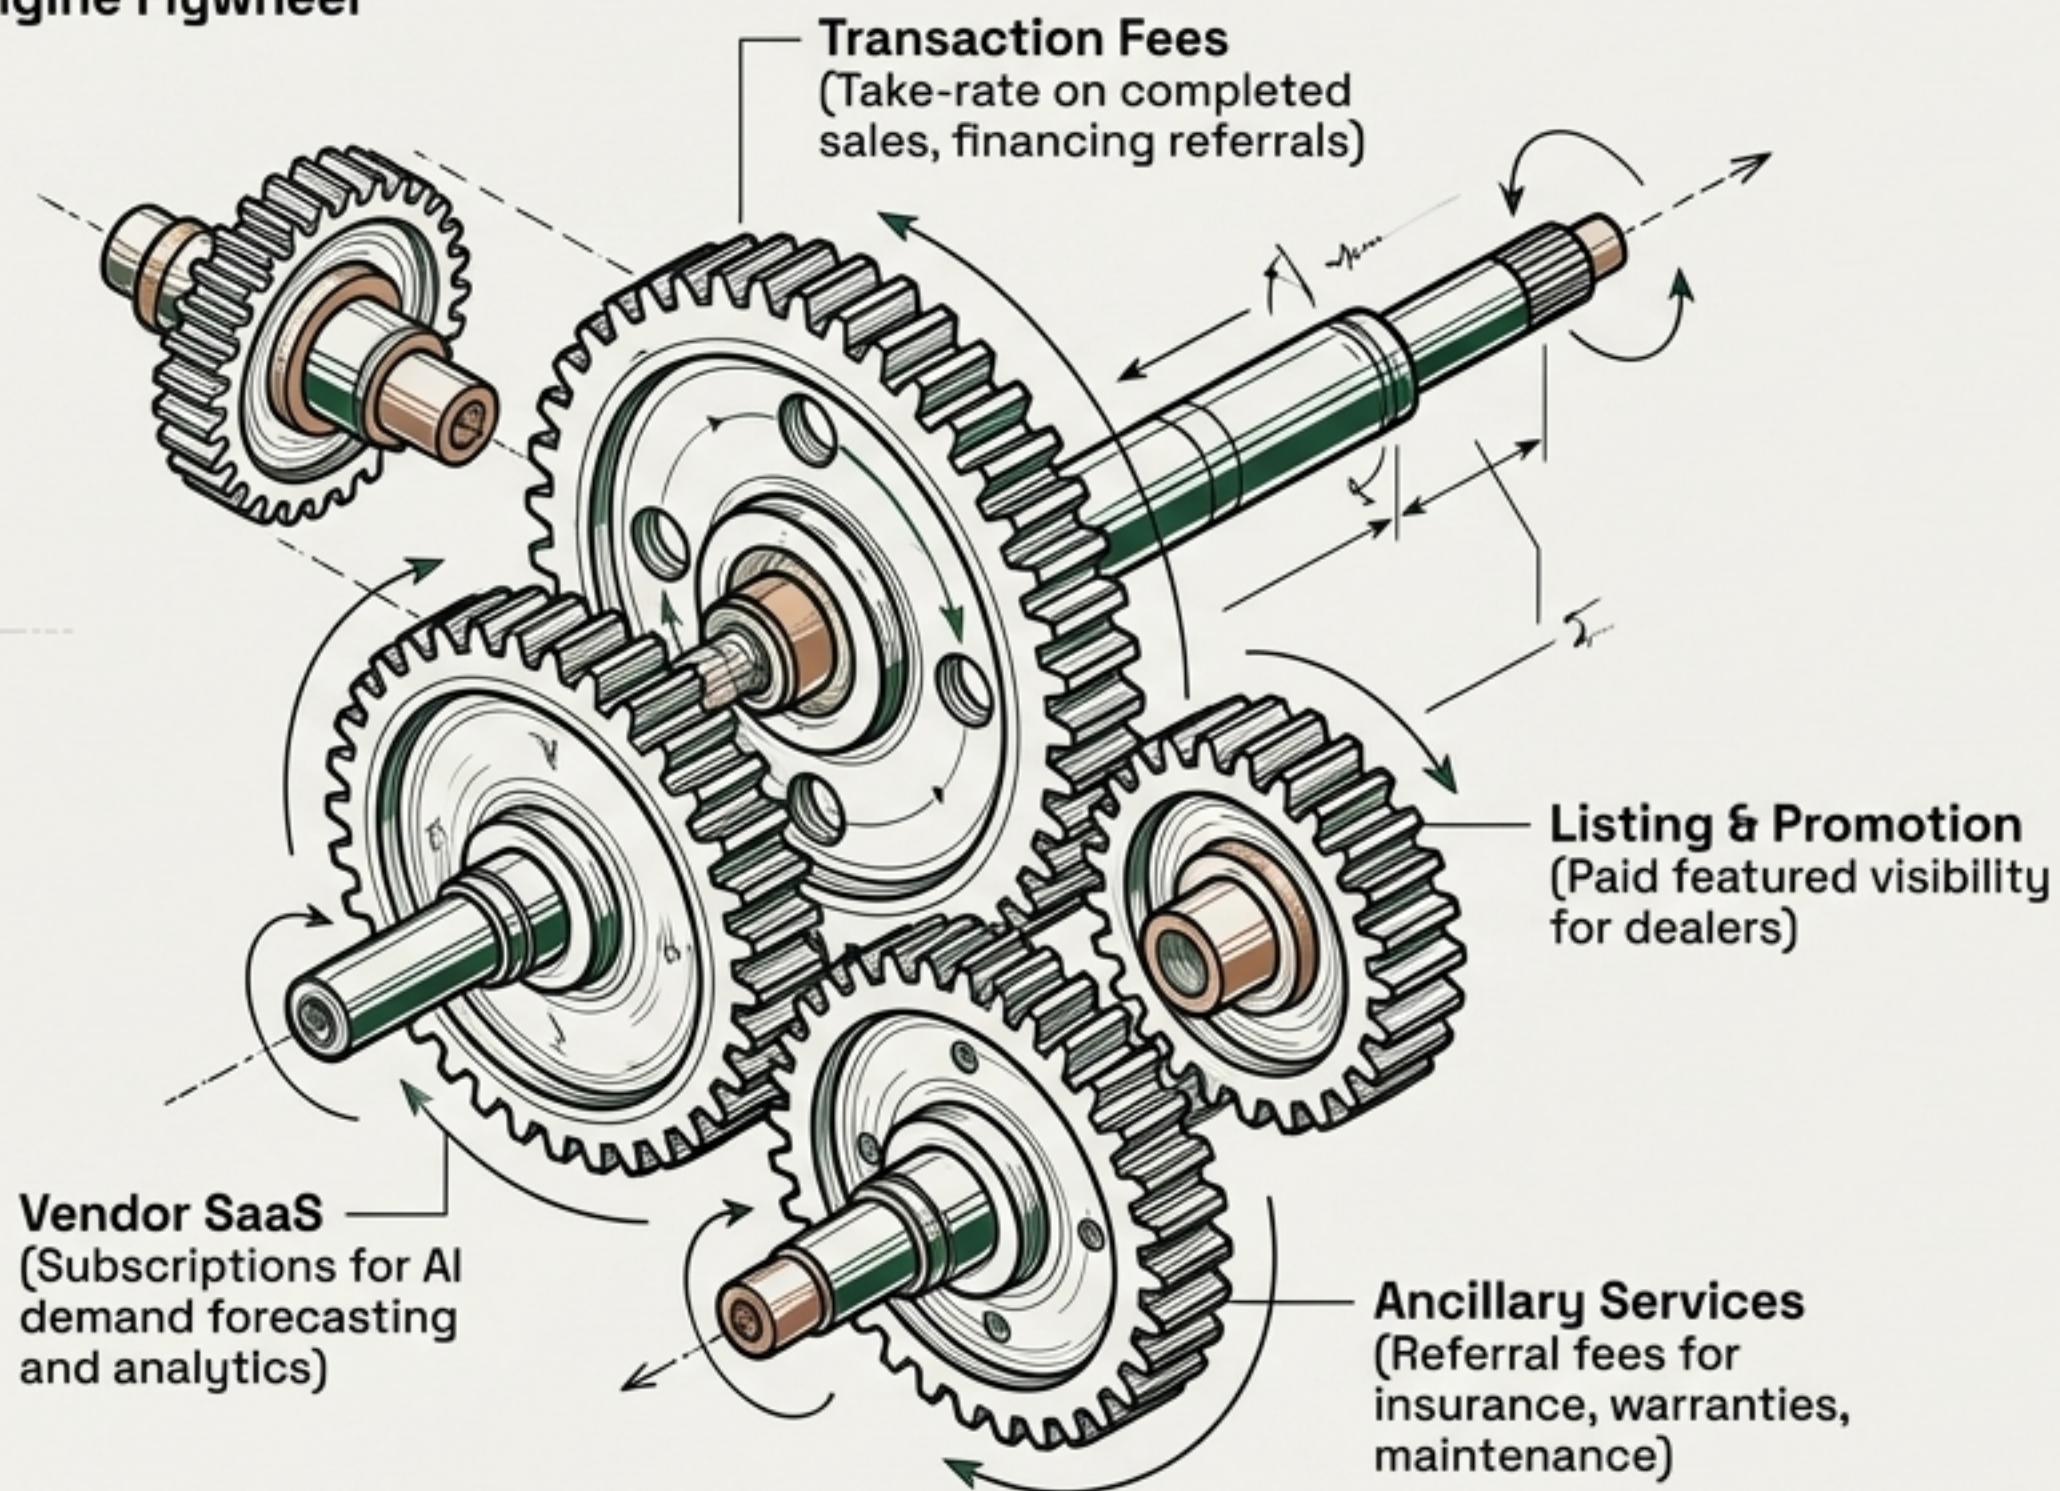

|            | Classifieds 1.0<br>(Dubizzle, OpenSooq) | Vertical Dealers 2.0<br>(CarSwitch, SellAnyCar) | Trust Engine 3.0<br>(GulfCarX)         |
|------------|-----------------------------------------|-------------------------------------------------|----------------------------------------|
| Onboarding | Ad-first (Unverified)                   | Manual Inspection                               | <b>Inspection-First + AI Vetted</b>    |
| Discovery  | Manual Filters                          | Basic Search                                    | <b>Conversational AI Genie</b>         |
| Pricing    | Opaque / Asking Price                   | Dealer Set                                      | <b>AI Fair Value Guidance</b>          |
| Post-Sale  | None                                    | Minimal                                         | <b>Smart Garage / Lifecycle Upsell</b> |

Competitors like CarSwitch have recently raised significant VC (e.g., \$35M Series B), confirming deep investor appetite. GulfCarX captures the premium, evolved segment of this same demand.

# Layered monetisation powered by highly efficient infrastructure

## Engine Flywheel

## Diagnostic Readout

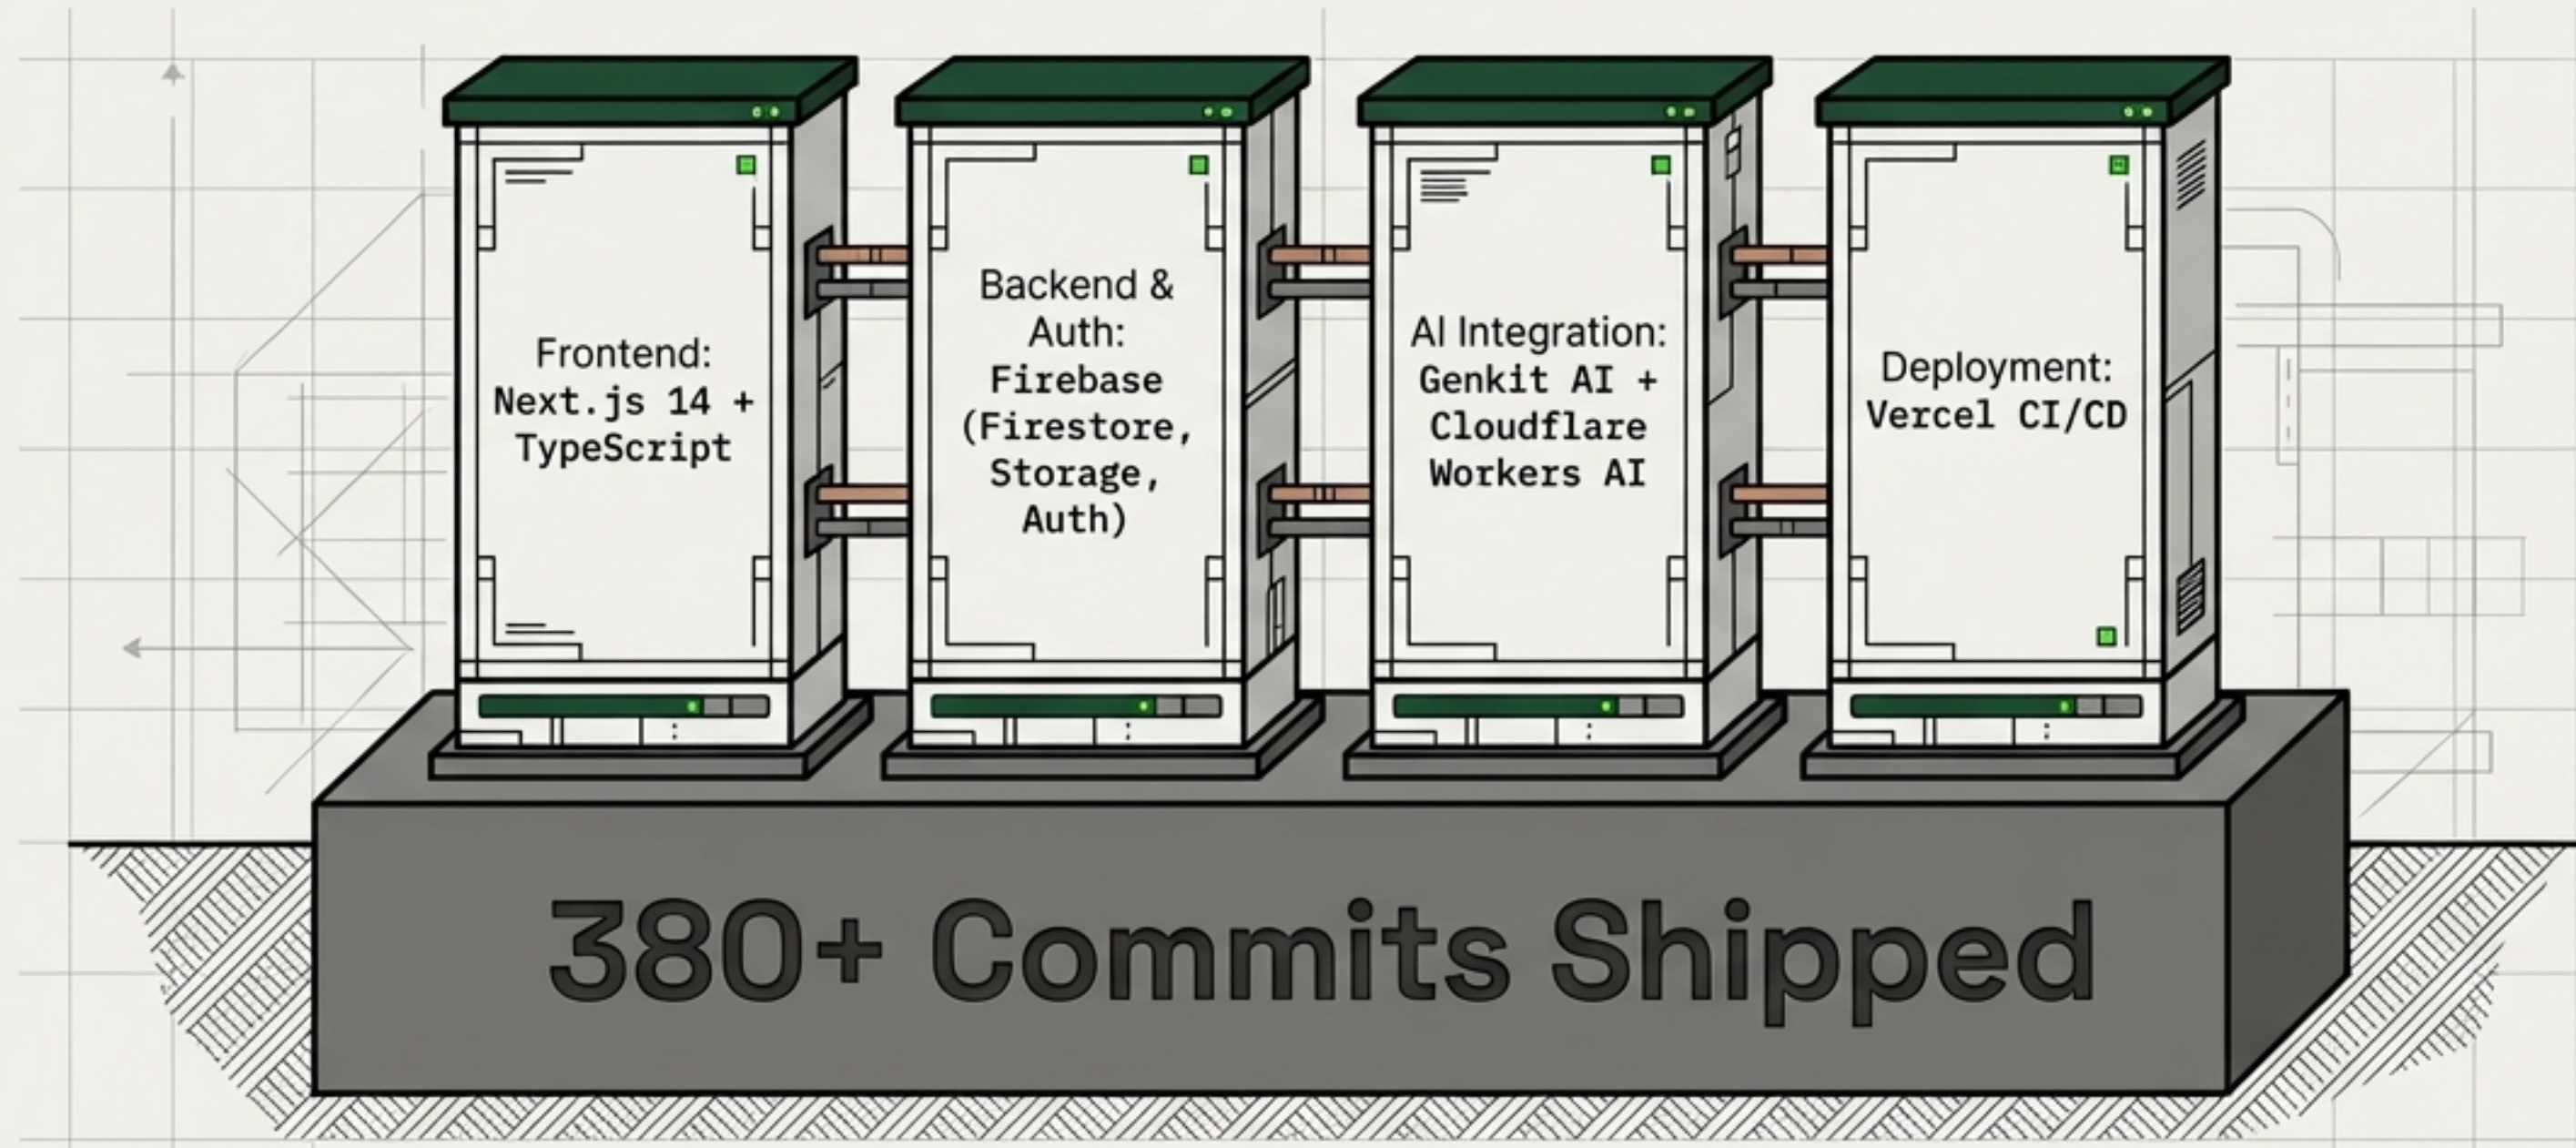

### [INFRASTRUCTURE BURN]

- Modern serverless stack (Vercel, Cloudflare, Neon, Firebase).
- Estimated operating cost: **₹3,800-₹6,640 per month** at 1K-5K daily active users.
- Result: **Ultra-low fixed burn and rapid path to healthy gross margins.**

# The unfair advantage: A live, production-grade foundation

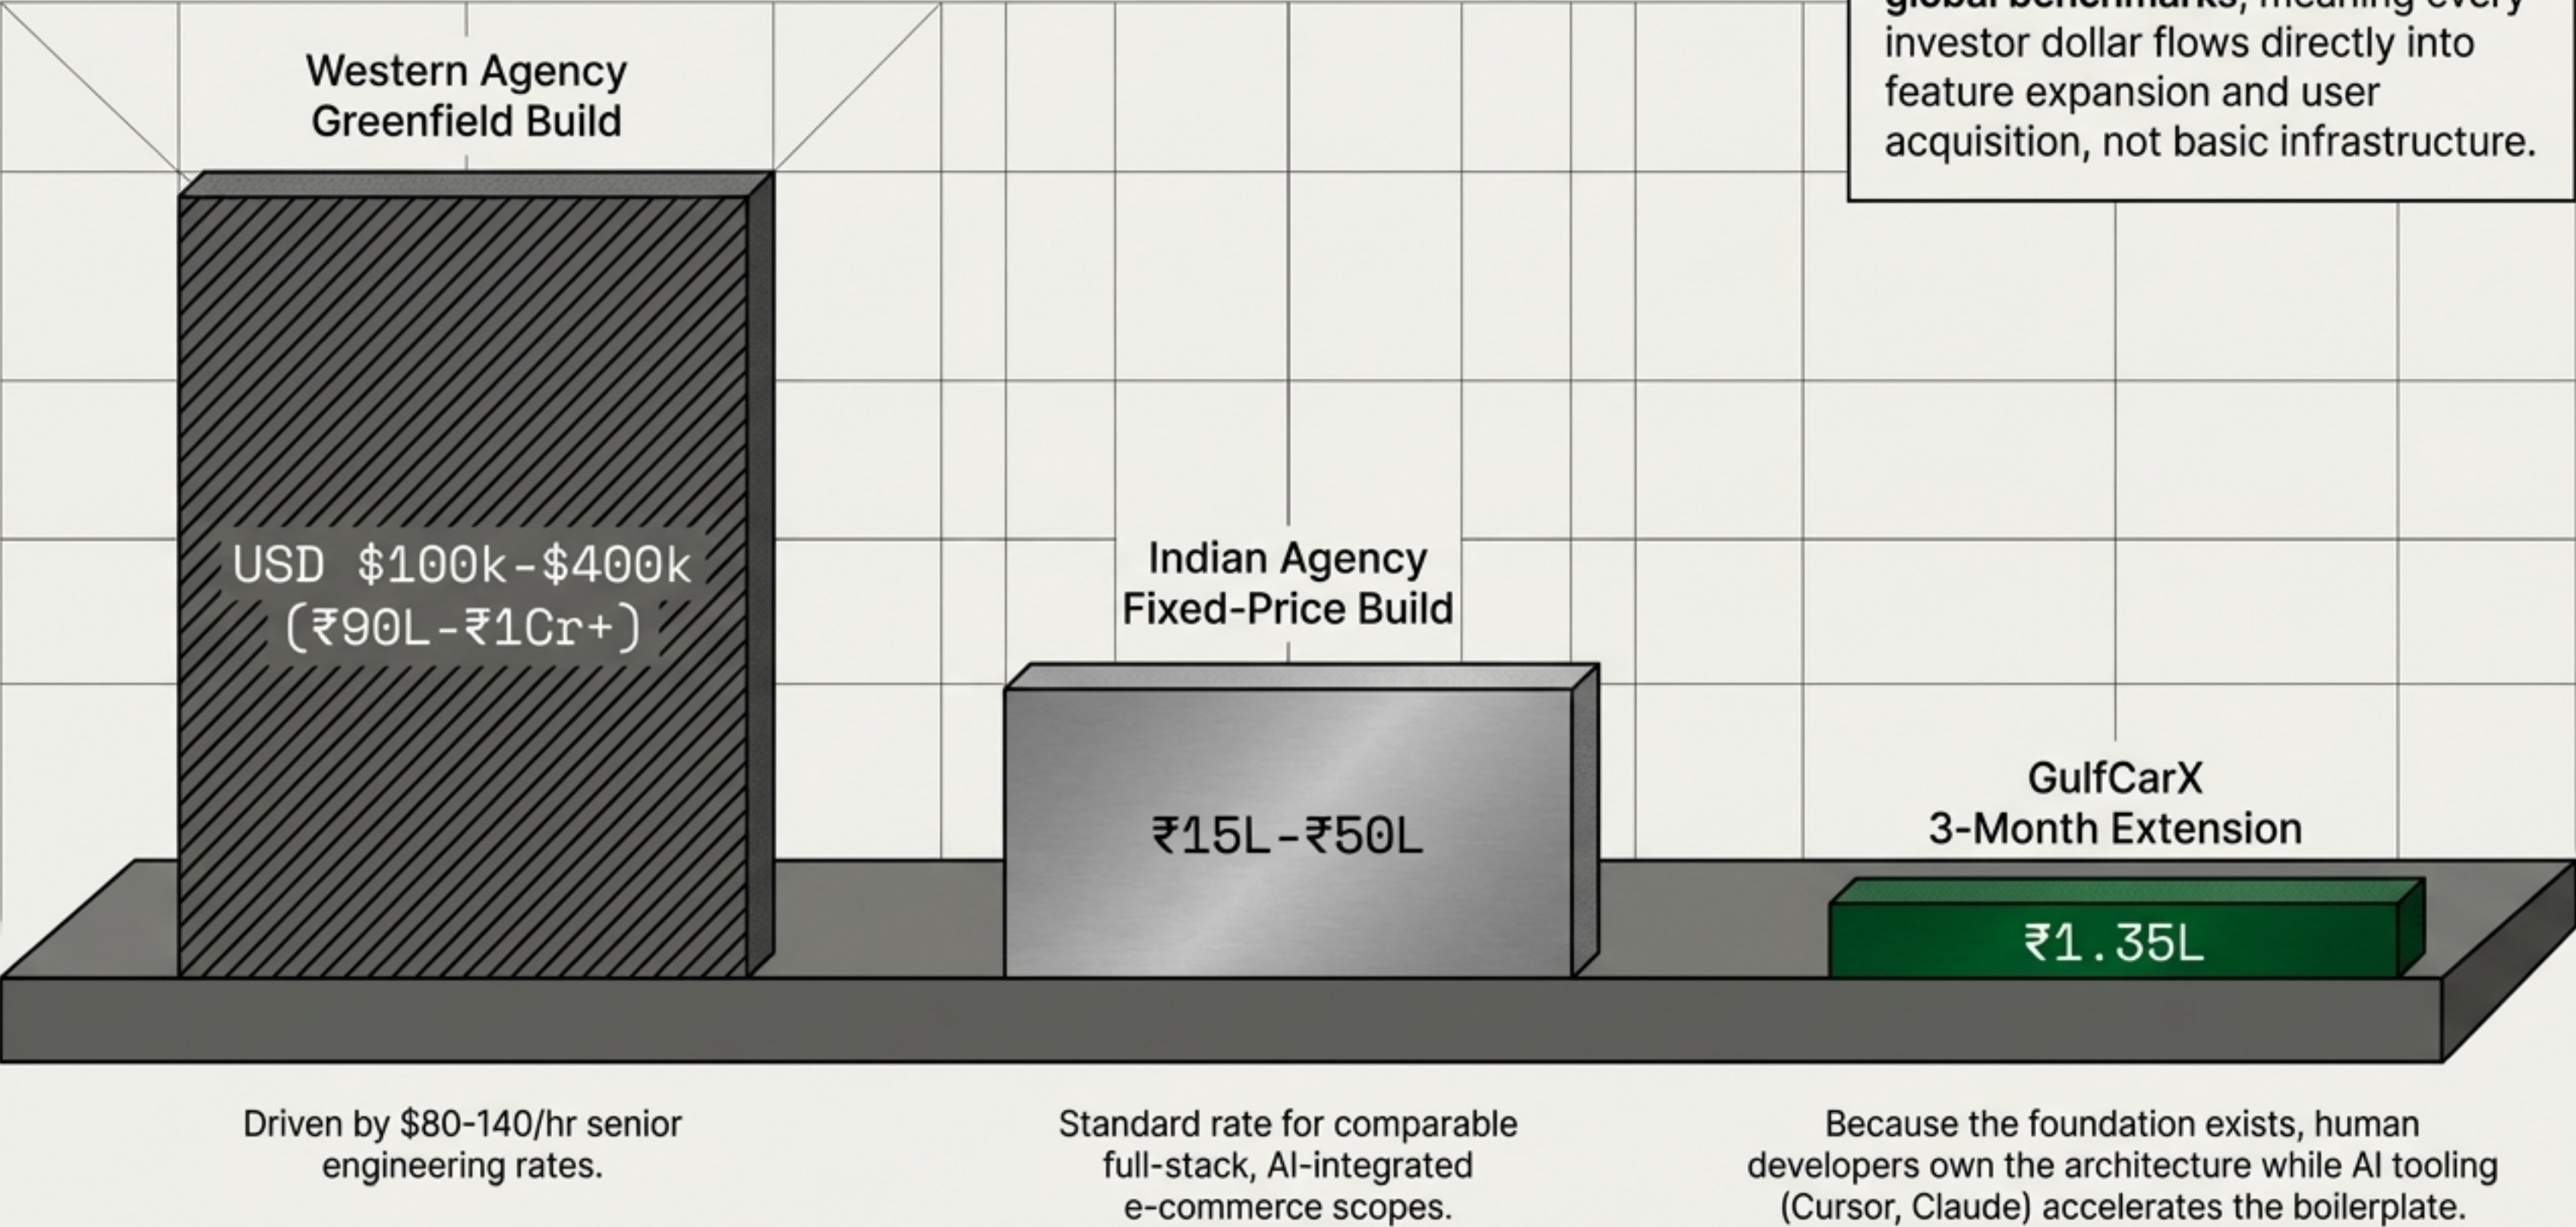

The core architecture, messaging, admin dashboards, and AI integrations are **already implemented and live.**

We are not pitching a prototype or a greenfield build. GulfCarX is a live codebase representing tens of thousands of dollars of sunk engineering value.

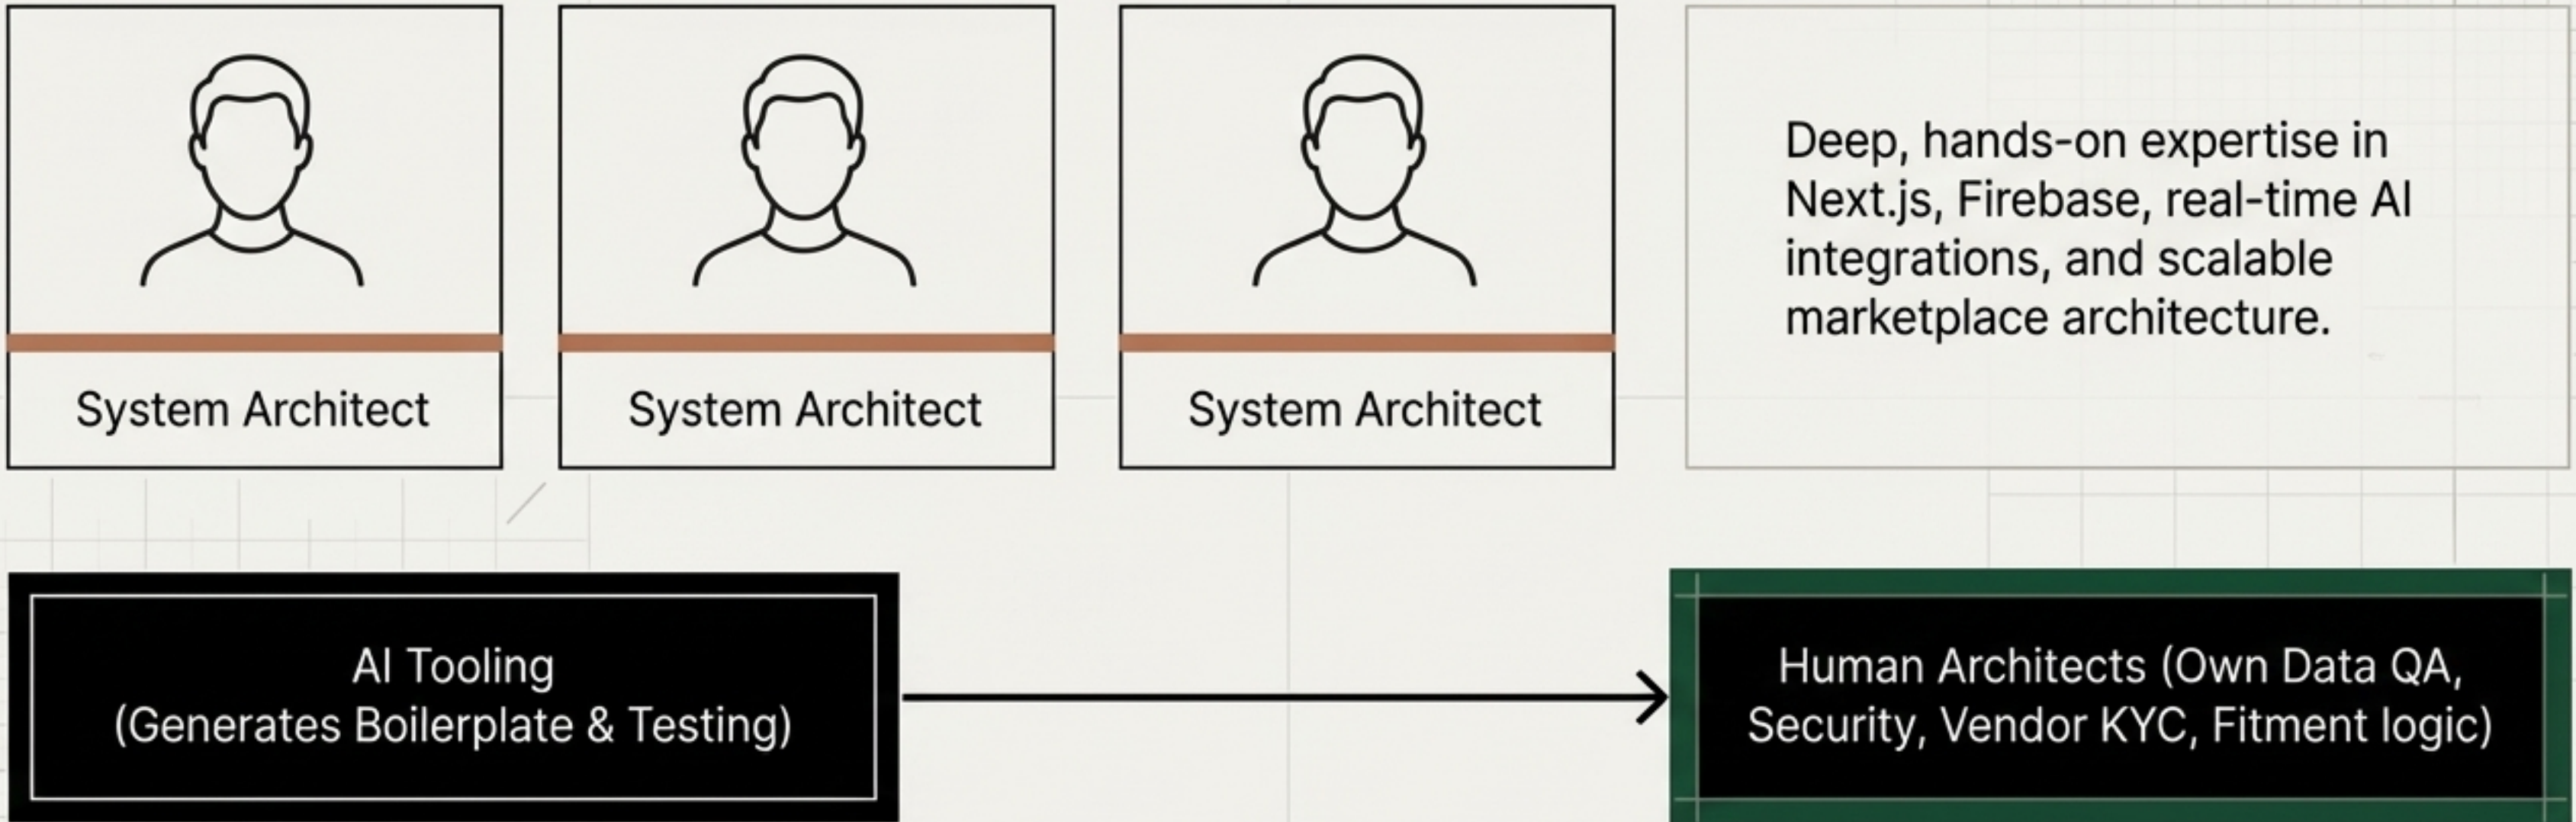

# Extreme capital efficiency and execution arbitrage

# The execution engine: Human architecture, AI acceleration

A highly specialized, three-person pod capable of out-shipping traditional agencies at a fraction of the capital burn.

# The 3-month deployment plan & funding ask

| Phase 1 (Month 1): Ship Buyer Value                                               | Phase 2 (Month 2): Strengthen Trust                                                         | Phase 3 (Month 3): Scale & Differentiate                                                        |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| - Launch Garage + VIN fitment layer. Deploy AI Genie basic conversational search. | - Deploy verified fitment layer, vendor reputation engine, and basic forecasting analytics. | - Roll out 'Shop Local' dealer proximity, smart maintenance bundles, and visual identification. |

## INVESTMENT CASE

[ASK\_REQUIREMENT]: ₹1.35L (₹1.5L billed) engineering budget over 3 months.

[DELIVERABLES]: 8 market-validated modules fully integrated into the live platform.

[MILESTONE]: Reaching baseline active listings and monthly transactions, achieving readiness to scale paid acquisition across UAE and KSA.
